Trading Summary

Monday, July 20, 2026 | For Anna

$5,995.24 → $7,142.41 +19.1% for the day

Four trades on Monday, all four profitable. I put essentially the whole account into each position, sold it, then rolled the proceeds into the next one, so the gains build on each other rather than sitting side by side.

The Trades

		Bought	Sold	Shares	Held	Gain	Account After
1	**NUVB**	$6.30	$6.44	952	38 min	**+2.2%**	**$6,128.47**
2	**ADVB**	$7.68	$8.38	781	4 min	**+9.1%**	**$6,672.82**
3	**ADVB**	$8.19	$8.50	818	3 min	**+3.8%**	**$6,926.40**
4	**STIM**	$1.98	$2.04	3,484	3 min	**+3.1%**	**$7,142.41**

Total gain: $1,147.17 on $5,995.24 of starting capital, a return of 19.13% for the day.

Notes On The Day

I traded ADVB twice. It was a very small company with only 1.38 million shares available, which is why it moved so violently. I bought the second leg only after the first pullback had cleared, sold into strength at $8.38, then took a second, smaller bite at $8.19 and sold at $8.50.

NUVB was the one trade with real news behind it: a positive update on a brain cancer drug. I judged the data as middling rather than spectacular, took the modest move and did not chase it.

STIM was the weakest setup of the day and I knew it going in. No news, thin trading, and it was already on my list of stocks that repeatedly spike and fade. I set a tight limit and it paid 3.1 percent. Sometimes the limit is the entire trade.

Trading Summary

Tuesday, July 21, 2026 | For Anna

$7,198.10 → $8,927.70 +24.0% for the day

Four trades again on Tuesday, and again all four were profitable. Same approach: the full account into each position, sold, then straight into the next. Nothing held overnight on either day.

The Trades

		Bought	Sold	Shares	Held	Gain	Account After
1	**POET**	$7.91	$8.18	910	1 hr 19 min	**+3.4%**	**$7,443.80**
2	**VIVK**	$6.23	$6.57	1,187	9 min	**+5.5%**	**$7,847.38**
3	**DFNS**	$7.00	$7.69	1,028	3 min	**+9.9%**	**$8,556.70**
4	**DFNS**	$6.03	$6.29	1,400	4 min	**+4.4%**	**$8,927.70**

Total gain: $1,729.60 on $7,198.10 of starting capital, a return of 24.03% for the day.

What Stood Out

My shortest trades made the most money. I held DFNS for three minutes and it returned nearly three times what POET returned over an hour and nineteen minutes. Speed of rotation is doing more work than picking well.

I traded DFNS twice: sold at $7.69 in the late morning, watched it come back down, and bought it again at $6.03 for a second gain. Same stock, two separate trades, just over $1,080 between them.

I was also out working on the fence for about an hour while I held POET, which is a fair illustration of how little hand holding this needs once a position is set with a limit.

What I Left On The Table

One stock, CPHI, rose more than fivefold on Tuesday and I did not own it. My plan was to buy a dip and the dip never came, so I did not force it. It has since been suspended from trading six separate times, which is a good reminder that the ones that get away are not always the ones worth catching. I also came close to a fifth position and passed on it. It has drifted lower since.

Two Day Summary

Monday, July 20 to Tuesday, July 21, 2026 | For Anna

$5,995.24 → $8,927.70

+48.9% over two trading days

	Started	Ended	Gain	Return	Trades
Monday July 20	$5,995.24	$7,142.41	**$1,147.17**	**+19.13%**	4 of 4 profitable
Tuesday July 21	$7,198.10	$8,927.70	**$1,729.60**	**+24.03%**	4 of 4 profitable
Combined	$5,995.24	$8,927.70	**$2,932.46**	**+48.91%**	8 of 8 profitable

The Pattern

Eight trades across two days and every one of them closed profitable. That will not hold forever and I am not counting on it. What I do think is repeatable is the structure: get in with a limit, take the gain, get out, look for the next one, and never hold overnight.

The clearest lesson across both days is that the fastest trades paid the best. The three shortest positions of the two days, all under five minutes, produced $544, $709 and $371. The two longest, at 38 minutes and 79 minutes, produced $133 and $246. More rotations has meant more money, not less.

Both days were sourced the same way: a morning screen that watches roughly three thousand stocks and flags the ones moving unusually fast on unusually heavy trading. None of these eight were companies I was tracking beforehand.

Starting capital for each day is taken as that day's first position and assumes no deposits or withdrawals. Monday closed at $7,142.41 and Tuesday's first position was $7,198.10, a difference of $55.69 that is not explained by the trades listed here. Compounding the two daily returns on their own gives 47.76% rather than 48.91%. All figures come from my own trade records and are before commissions, fees and taxes. Past results are not a guide to future returns. This summary is for information only and is not investment advice.
